Your new team.

Six colleagues and a toolbox – working only for you.

Team Kriwet AI · what it is, what it does for you, how to get started

Kriwet Projektmanagement GmbH · Toolkit Team Kriwet AI · Release R2.8 · November 2026

Imagine ...

1 Your boss puts a team at your side.

2 It works only for you. Not for the department – for you.

YOU

Kriwet project lead

3 Never sick. Forgets nothing. Keeps working at night if you want.

4 You talk to it like to colleagues. Nothing to learn by heart.

The team — a picture for your head

Seven who work for you. Remember this picture – now we'll hang the rest on it.

Anke

your project memory

Is in every chat, first reads what's open, and takes notes while you work.

You say

"What's still open on this project?"

What comes out

STATUS
what's open

LOG
what happened

LEARN
what you corrected

Who owes you what. Which deadline is running. Where two statements contradict each other. And at the end of every chat a handover memo, so the next chat picks up exactly there.

She speaks up on her own – you don't have to call her.

Your benefit: After a few weeks she knows more about your projects than you ever could remember.

Konrad Zuse

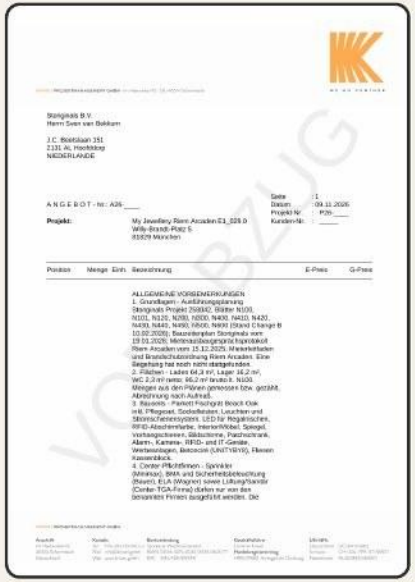

your estimator

Drawings or a bill of quantities in – finished quote out.
With quantities, Excel, GAEB and the Taifun file.

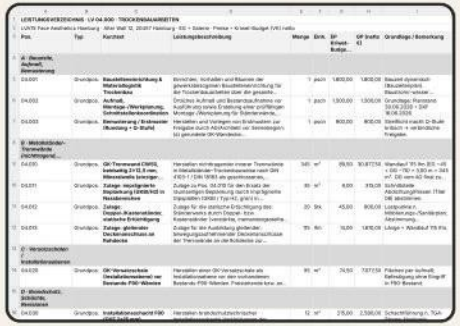

You say

“Run the numbers on this.”

What comes out

The quote – looks as if printed straight from Taifun.

The Excel bill of quantities in Kriwet format. And the Taifun file right along with it – purchase and sales price per item, so Arnold only has to enter it.

Your benefit: Two days of estimating become one afternoon. Every price has a source, nothing is guessed.

Ernst Neufert

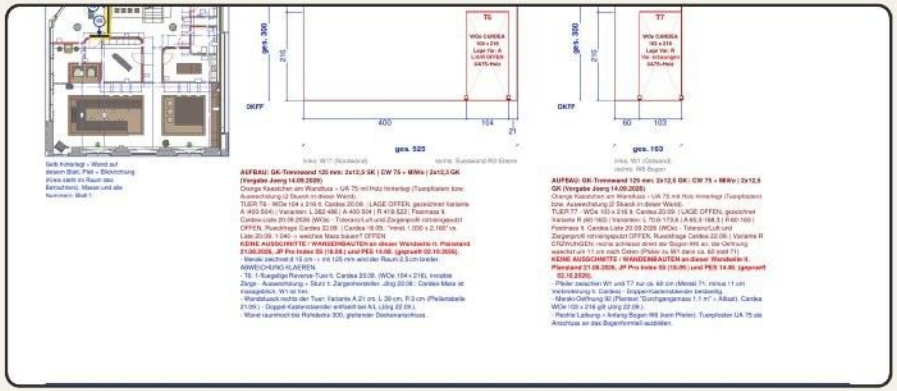

your shop drawing planner

Wall elevations, ceiling plans, flooring, tiles, sanitary, sprinklers, strip-out – as a drawing set people build from.

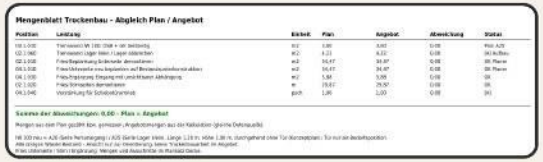

You say

> **“First a sample for the painter, then the rest.”**

What comes out

Every view with a key plan and viewing direction. All trades in the same sheet layout – drywall, painting, electrical, ceiling, flooring, sanitary.

Last sheet: drawing against quote. Deviation zero.

Your benefit: The subcontractor builds from it without asking. And what’s in the drawing is also in the quote.

Arnold

the Typhoonator – your man in Taifun

The only one on the team who clicks in Taifun. Whatever Konrad builds, Arnold enters.

You say

> **“Put the quote into Taifun.”**

What comes out

Taifun · Edit project

Data exchange → Sales documents → **Import quote**

Check customer → Yes → total against target

Enter the quote, create the subcontractor order, invoice draft as a template for accounting, pull reports.

Invoice draft → template confirmation in Taifun

Your benefit: Konrad’s numbers land in Taifun – purchase and sales, no retyping, no duplicate customers.

Hasso Plattner

your project manager

You give him what you've got – drawings, a bill of quantities or a few phone photos. He first asks what you want to order.

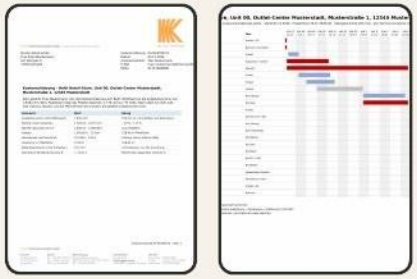

You say

> **"Hasso, new project Sampletown, the drawings are in the project folder."**

What comes out

☑ Quote ready	☐ Up to award
☐ Up to execution	☑ Shop drawings
☑ Schedule	☐ Final billing

First the order form: you tick what you want. Then Hasso runs Konrad, Ernst and Arnold through the project one after the other.

Cost estimate, construction schedule, quote, drawings, subcontractor requests – all in one file.

Your benefit: One point of contact for the whole project. He asks in batches, not about every little thing – and never quietly drops anything.

Beate Beleg

receipts for accounting · beta

Turns your receipts and the subcontractors' invoices into a checked package for accounting.

You say

"Beate, here are my receipts from October."

What comes out

Receipt list October · one receipt per PDF			
14/10	Gas station	€86.40	checked
22/10	Hotel Hamburg	€312.00	Question: hospitality?
31/10	Drywall invoice	€12,480.00	reverse-charge note missing

Every receipt checked against the mandatory details – recipient, tax, small amounts, hospitality, construction services. Plus the open questions, ready for the email to accounting. Nothing is ever sent.

Your benefit: Monthly package in minutes – and accounting has no more questions. Still beta, so take a look.

How they mesh

A job runs through the team like through a chain.

YOU
say what you want

→ **Hasso**
asks and steers

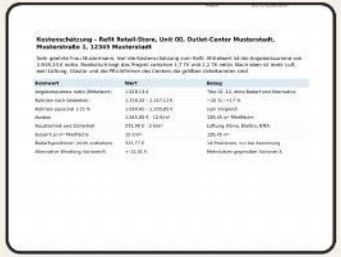

→ **Konrad**
estimates

→ **Ernst**
draws

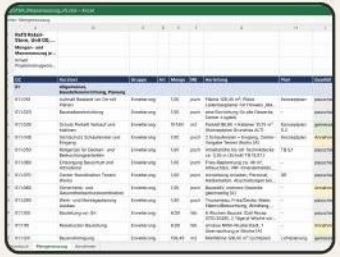

→ **Arnold**
enters it

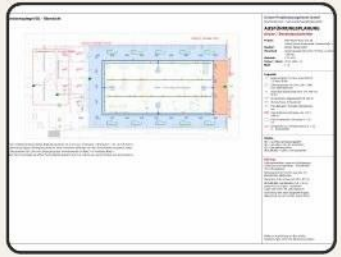

→ **Taifun**
quote, order

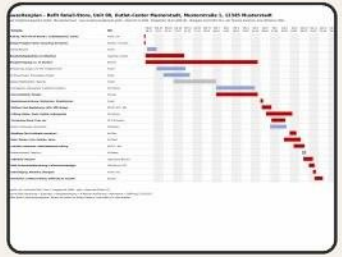

One source of data. That's why quote, Excel, drawings and Taifun always match – down to the cent.

What ends up in the file: cost estimate · quote · quantities · drawings · construction schedule

The toolbox – for everyone

Belongs to no single colleague. Runs in the background or when you say so.

Morning Briefing

Inbox, calendar, deadlines, Voicenotes – ten minutes instead of an hour.

Email draft

You say what goes in. The draft sits in Outlook. Nothing is ever sent.

Memory log

Chat getting full? The next one picks up seamlessly. You lose nothing.

Tidy up folders

Show first, then approve, then sort. Nothing gets deleted.

Voicenotes

Whatever you say into it on site ends up in the project memory.

Check attachments

New email attachments against what you have: versions recognised, duplicates reported.

Five things that always apply

Every rule comes from a real incident. You don’t have to learn them – you’ll notice them.

1. The company folder is read-only. Your stuff lives in your own folder.
2. Nothing gets sent, nothing deleted. You sign off.
3. Numbers are checked against the original – and you still look them over before anything goes out.
4. If something doesn’t work, you hear about it right away. No quietly muddling on.
5. Prices, purchase prices and internals stay in-house.

The honest part

At first it feels unfamiliar. A tool that asks you questions – and you have to get used to looking at interim results instead of waiting for the final one.

The first few days it feels slower than before. That passes. After two or three jobs it's second nature.

None of this is finished. It gets better every week – with what you report back. Whatever's missing or annoying: tell Jörg.

Whoever uses it routinely doesn't just work a bit faster. They play in a different league.

How to get started

One time, 45 to 60 minutes. Claude asks you the rest itself.

1

Connect the company folder

In the chat click “+” → Add folder → on the server choose the folder **TEAM KRIWET AI** → click **Allow** in the pop-up.

2

Paste the start prompt

This folder holds the file **01_STARTPROMPT**. Open it, copy the text below the line, paste it into the chat, send.

3

Claude guides you

14 steps, one per message. You create your own folder on the desktop in step 0 – Claude tells you exactly how. You can pause any time.

To read up on: the quick guide (five minutes) and this handbook are in the company folder TEAM KRIWET AI, folder “Handbuch”.

Your team. Your capacity.

Start with one thing. Morning Briefing. An email draft. A folder. · Questions, ideas, pitfalls: Jörg Ebbing · je@kriwet.gmbh
